

# Statistical Causality Tests in Econometrics

(Doctoral dissertation)

## C o n t e n t s

- 1. Introduction 1**
- 2. Overview of the different causality concepts in econometrics 5**
  - 2.1 Introduction 5
  - 2.2 Simon's approach 8
  - 2.3 Wold's approach 12
  - 2.4 Granger's approach 19
  - 2.5 Contemporary comprehension of causality and exogeneity in econometric models 24
  - 2.6 Gradation of exogeneity types according to the different modes of model usage 31
  - 2.7 Critical analysis of alternative causality concepts in econometrics 35
- 3. Definition of causality in time series analysis and implications 40**
  - 3.1 Evolution of the definition of causality in time series analysis 40
  - 3.2 Conditional independence and orthogonality in defining causality 50
  - 3.3 Generalization of the causality 64
  - 3.4 Usage of the statistical concept of causality in economics and econometrics 73
  - 3.5 Impact of causality on statistical estimators 81
- 4. Statistical causality tests 86**
  - 4.1 Methodological problems of investigation of the suggested causality concepts from the point of view of statistical tests 86
  - 4.2 Methodological differences between causality tests 87
    - 4.2.1 Direct Granger test 88
    - 4.2.2 Sims test 100
    - 4.2.3 Modified Sims test 107
    - 4.2.4 Haugh-Pierce test 111
    - 4.2.5 Geweke's measure of linear dependence and causality 118
  - 4.3 Comparative analysis of causality tests 126
  - 4.4 Impacts of systematic sampling and temporal aggregation 129
  - 4.5 Impacts of other factors on causality and statistical causality tests 136
- 5. Analysis and application of causality tests in small samples 141**
  - 5.1 Simulation study of causality tests behavior 141
    - 5.1.1 Recent Monte Carlo studies of causality tests 142
    - 5.1.2 Simulation experiment design 147
    - 5.1.3 Simulation experiment results 152
    - 5.1.4 Concluding remarks and analysis of simulation output 164
  - 5.2 Inflation and wages - causality analysis 168
- 6. Conclusion 182**
  - Literature 189
